

Software Developer in Test - Remote

VAVA Technologies Inc (/company/26296943), Irving, TX 75039

SOFTWARE DEVELOPER (C#/Selenium)

VAVA, a Technology Company, is hiring a Software Developer in Test with strong C# and API automation experience!

What You'll Do:

- **Develop** high quality and reusable Web API, service, UI, performance, and other **test automation** for hybrid cloud applications (SaaS, PaaS, IaaS) that support high availability, high scalability, and parallel processing
- Leverage **Test** Plans to configure test cases to be converted to automated tests, continuous build (CI/CD pipelines), and automated test frameworks.
- Participate in special projects and conduct technical research regarding different ways to improve our test automation development environment and best practices.
- Show initiative and motivation to solve complex problems, adapt to changes, and follow through on tasks.
- Work in Agile teams following Agile + SAFe methodologies to deliver high quality products on time.
- Improve your skills via self-learning, brown bag sessions, and other group learning opportunities that you are always welcome to attend or even lead.
- Use the latest test automation development tools, and follow industry and Wolters Kluwer technical standards.
- Understand the use of technology and how its implementation affects strategic business goals.
- Mentor less-experienced staff in their career development.

Skills / Experience You Will Need:

- Bachelor's degree in Engineering / Computer Science preferred
- 5+ years of programming experience with the .NET Framework, .NET Core, REST, and C#
- 2+ years as a senior software Quality Engineer with similar roles / responsibilities.
- Expertise designing, coding, and implementing automated tests that have stability, performance, scalability, and localization requirements in mind.
