Systems Engineer

Job Summary

- This role is responsible for ensuring the technical design, development, installation, and maintenance of state-of-the-art software applications and services for the company. The role plays a crucial role in building technical solutions to help other developers/engineers deliver faster with modern software and application development tools. The role is responsible for technical need analysis, project management, technical support, customer support, programming, and testing. The role applies subject matter knowledge, lead complex projects, and exercise independent judgment in resolving business issues and establishing policies.

Responsibilities

- Works with software engineering team to identify and implement the most optimal software solutions for the organization.
- Plans, designs, and develops software applications.
- Manages software development projects in accordance with the organization's security guidelines.
- Deploys and debugs software initiatives as needed in accordance with best practices throughout the software development lifecycle.
- Contributes to technology strategy and engineering roadmaps around software engineering; executes strategic software engineering proof of concepts.
- Collaborates with IT operations and testing organizations to ensure timely releases of projects and database environments are sustainable.

- Collaborates with business analysts, source system experts, and other team members to determine data extraction and transformation requirements.
- Consults with the business to determine logical design for new software solutions according to emerging business goals.
- Performs code reviews, analyze execution plans, and re-factor inefficient code.
- Provides technical support & guidance to Software Engineers I/II in development of desired software/applications.

Education Experience Recommended

- Graduate Degree in Computer Science, Information Technology, Software Engineering, or any other related discipline or commensurate work experience or demonstrated competence.
- Typically has 4-7 years of work experience, preferably in software designing & development, software architecture, programming languages, or a related field or an advanced degree with 3-5 years of work experience.
